DETAILED ACTION

Election/Restrictions

1. Claims 1-6, 10, 16-19, 21, 23-25, 27-37, 41-44, 49 and 53-61 are directed to an allowable process. Pursuant to the procedures set forth in MPEP § 821.04(B), claims 45, 47 and 50-52, directed to the products used in the allowable process of analyzing adducts in fluid and/or solid material suspected of containing the adducts, previously withdrawn from consideration as a result of a restriction requirement, Claims 1-6, 10, 16-19, 21, 23-25, 27-37, 41-45, 47 and 49-61 are hereby rejoined and fully examined for patentability under 37 CFR 1.104.

Because all claims previously withdrawn from consideration under 37 CFR 1.142 have been rejoined, **the restriction requirement as set forth in the Office action mailed on 07 April 2009 is hereby withdrawn.** In view of the withdrawal of the restriction requirement as to the rejoined inventions, applicant(s) are advised that if any claim presented in a continuation or divisional application is anticipated by, or includes all the limitations of, a claim that is allowable in the present application, such claim may be subject to provisional statutory and/or nonstatutory double patenting rejections over the claims of the instant application. Once the restriction requirement is withdrawn, the provisions of 35 U.S.C. 121 are no longer applicable. See *In re Ziegler*, 443 F.2d 1211, 1215, 170 USPQ 129, 131-32 (CCPA 1971). See also MPEP § 804.01.

2. The following is an examiner's statement of reasons for allowance: A method for analyzing N-adducted amino acids or adducted N-terminal peptide/proteins utilizing isothiocyanate reagent containing fluorescent moiety and an ionizable moiety-FITC, DNITC or DABITC is not found in the prior art.

3. The closest prior art of record is found in the previous Office Action to Kautiainen in view or Rydberg in which neither of the references of record disclose, teach nor suggest a using ionizable and fluorescent isothiocyanate reagents for the measurements of the N-terminal adducts. The new and novel aspect of the instant invention uses compounds as cited in Claim 45 to be used in the method of adduct measurements. The instant invention mentions, discloses and teaches advantages in which the prior art of record does not directly teach nor inadvertently suggest using the FIRE-procedure for direct measurements in complex mixtures, such as whole blood, without previous purification of the desired proteins. The present invention teaches the art of measuring N-terminal protein adducts by use of Edman isothiocyanate reagents to improve selectivity enrichment and the selectively measure N-terminal secondarily bound adducts with high sensitivity. The two previous references used disclose methods of analyzing N-terminal adducts but fail to disclose fluorescent and ionizable Edman reagents, which are essential step in the method, nor do the method of the previous two references function properly if one was to use fluorescent and ionizable Edman reagents.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably

accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
